Safe Harbor Statement

This presentation contains certain forward-looking statements.

These forward-looking statements may be identified by words such as 'believes', 'expects', 'anticipates', 'projects', 'intends', 'should', 'seeks', 'estimates', 'future' or similar expressions or by discussion of, among other things, strategy, goals, plans or intentions. Various factors may cause actual results to differ materially in the future from those reflected in forward-looking statements contained in this presentation, among others:

1. pricing and product initiatives of competitors;
2. legislative and regulatory developments and economic conditions;
3. delay or inability in obtaining regulatory approvals or bringing products to market;
4. fluctuations in currency exchange rates and general financial market conditions;
5. uncertainties in the discovery, development or marketing of new products or new uses of existing products, including without limitation negative results of clinical trials or research projects, unexpected side-effects of pipeline or marketed products;

6. increased government pricing pressures;
7. interruptions in production
8. loss of or inability to obtain adequate protection for intellectual property rights;
9. litigation;
10. loss of key executives or other employees; and
11. adverse publicity and news coverage.

TTY Biopharm cautions that this foregoing list of factors is not exhaustive. There may also be other risks that management is unable to predict at this time that may cause actual results to differ materially from those in forward-looking statements.

You are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date on which they are made. TTY Biopharm undertakes no obligation to update publicly or revise any forward-looking statements. Any statements regarding earnings growth is not a profit forecast and should not be interpreted to mean that TTY Biopharm's earnings or earnings per share for this year or any subsequent period will necessarily match or exceed published earnings or earnings per share forecasts of TTY Biopharm Company Limited.

Our Mission

We have been striving to extend liposomal & microsphere depot platform technologies for treatment of various diseases.

Our Target is to improve health and quality of life through innovative, cost-effective therapeutics and specialty drugs.

Our focus is on the **“Unmet Medical Needs”** in challenging diseases throughout the world, such as Cancer, CNS, Autoimmune, Diabetes Mellitus & Infectious Diseases.

Specialties- Caelyx®/Doxil®

Caelyx®/Doxil® (Doxorubicin HCl Injection)

Liposome: A tiny bubble that can be filled with drugs and carry drugs into tissues.

How does liposome treat cancer? Healthy human blood vessels are encapsulated by endothelial cells which are bounded by tight junctions (BBB->Blood Brain Barrier). Tight junctions will stop large particles like liposome leaking out of the vessel. Tumor vessels do not have tight junctions. Therefore, liposomes can penetrate tumor cells from the blood but blocked out by endothelial wall of healthy cells. In another word, liposome can "target" tumors by nature.

Mechanism of SPL206

Acromegaly (GH)

Orphanet Journal of Rare Diseases 2008,3:17.

Mechanism of Action (SPL206)

Sandostatin LAR, JP insert

Somatostatin binds to somatostatin receptors (SSTR), exert a variety of physiological effects on various tissues, organs. SSTR has five subtypes (SSTR1 ~ 5), the binding affinity of octreotide varies depending on the sub-type, high in the order of SSTR2> SSTR5> SSTR3

Octreotide is presumed to bind to SSTR present on the cells of the pituitary adenoma and gastrointestinal hormone-producing tumor, VIP, it suppresses the secretion of gastrointestinal hormones and GH of gastrin.

Specialty- LGIA10

The Role of Incretins (GLP-1 and GIP) in Glucose Control

Mechanism of LGIA10

DPP-4 Inhibition: A Means to Achieve Enhancement of Intact Incretins

In vitro and in vivo DPP-4 inhibition increases levels of intact incretins (GLP-1 and GIP). ^{1-3,5,15}

Mechanism of LGIA10

GLP-1 and Diabetes

Indication: Type II Diabetes Mellitus

Mechanism of LGIA10

DPP-4 Inhibitors Enhance Incretin and Insulin Secretion
